Call for Volunteers: Project AIMS- Artificial Inteligence against Modern Slavery

Project AIMS (Artificial Intelligence against Modern Slavery) is a partnership between Minderoo's Walk Free Initiative and The Future Society to develop a machine learning tool that will speed up the review process of companies' modern slavery statements. The tool builds upon the data researched by hundreds of students and volunteers for WikiRate's UK MSA Project.

During February and March 2021, there is a volunteer opportunity for master level students to join the WikiRate and Walk Free teams in developing the ground truth dataset for Project AIMS.

- **What you will do**: You will specialize in a particular requirement of the UK Modern Slavery Act and investigate how a large sample of companies disclose (or not) this information.
- **Your high-level contribution**: Your assessments will help minimize the bias of the algorithm and build in the nuances.
- **The expected output**: A pristine dataset that will be the base logic of the algorithm that will find the relevant information within a company's Modern Slavery Statement.
- **What we offer:**
  - Support. Training and support are provided by members of the WikiRate and Walk Free teams.
  - Work and research experience. Working with multidisciplinary teams from reputable organizations, you will 1) gain a practical understanding of how algorithms are developed, 2) grow your expertise on the topics of modern slavery and corporate accountability, and 3) expand your professional network.
  - We will provide a certificate confirming your involvement and invaluable contribution to the project.
